

EWI Onsite Consultation

INTRODUCTION

Obtaining an independent, third-party engineering review of your design for a new part or product can save time, labor, materials, and money when you move forward to production. What if you could have that same knowledge and experience available at your facility to optimize your process as well as your product?

In response to customer requests for onsite engineering reviews and assessments, EWI now offers **EWI Onsite Consulting** to bring technical expertise and resources directly to your factory floor on a short-term basis.

HOW IT WORKS

After an initial discussion to identify the resource you need, an EWI engineer will travel to meet with you at your facility. The consultation may include design reviews, process evaluation, or technology guidance to provide you with unbiased, vendor-neutral feedback as you initiate new projects or work toward improving your operations.

EWI Onsite Consultation includes:

- A scheduled visit of 1-3 days by an experienced EWI engineer
- A closing meeting with verbal review of findings, opportunities, and next steps
- An email summary of conclusions and recommendations sent within 5 business days of visit

THE EWI ADVANTAGE

EWI is the leading engineering and technology organization in North America dedicated to developing, testing, and implementing advanced manufacturing technologies for industry. By matching our expertise to your needs, our technology team can serve as a valuable extension of your innovation team, and provide premium, game-changing solutions that deliver a competitive advantage in the global marketplace.

PRICING

\$3000 per day EWI members
\$3600 per day Non-members

Travel expenses are additional.
